

Lookout Mobile Endpoint Security for Small Business

As your employees and data go mobile, Lookout closes your security gap

Overview

As more organizations rely on mobile devices and applications to store and access sensitive data, malicious actors are aggressively going after mobile devices as their most valuable target. For that reason, small businesses need a strong security strategy in the same way larger enterprises do. To stay ahead of attackers, your organization's security policies must extend to your mobile endpoint devices.

Lookout for Small Business makes it easy to protect mobile devices with predefined protection settings and unmatched visibility into the security of your entire fleet from a simplified dashboard. With simple 3-step deployment and on-device end user remediation capabilities, Lookout gives scaling businesses peace of mind by granting enterprise-grade security without requiring massive amounts of dedicated IT resources.

How It Works

Lookout for Small Business provides an intuitive cloud-based admin interface to easily enroll your organization's devices and gain real-time visibility into any mobile risks faced by your employees. Lookout leverages a lightweight app on the mobile device to protect it and, if needed, guide the employee through simple incident remediation on the device and return them to safety without relying on an IT team.

Benefits

Measurable reduction of risk

Understand your organization's mobile risk at a glance with simple Risk Status

Post-perimeter protection

As your employees access more sensitive data from mobile devices outside your four walls, Lookout protects them against malicious applications, phishing attempts, network attacks, and more to keep your growing business safe

Visibility into mobile incidents

Respond quickly and effectively with real-time visibility into incidents on mobile devices

Securely enable mobility

Embrace more flexible mobility programs, including BYOD, to increase employee productivity and stay competitive

Privacy by design

Ensure your data sovereignty and employee privacy policies are upheld using our privacy controls features

Easy to deploy and maintain

With simple 3-step deployment from the Lookout Console, it is easy to ensure full coverage of your mobile fleet now and as it scales in the future

Lookout for Small Business

As more sensitive data is accessed by mobile devices, they are increasingly becoming a target for attackers. Lookout for Small Business identifies mobile threats targeting these primary attack vectors:

- Web & Content-based threats: Phishing attacks or malicious websites & files
- App-based threats: Malware, rootkits, and spyware
- Network-based threats: Man-in-the-middle attacks
- Device-based threats: Jailbroken/rooted devices, outdated OS, risky device configurations

The Lookout Difference

- Lookout has amassed one of the world’s largest mobile security datasets due to our global scale and mobile focus. Lookout has collected security data from over 170M devices worldwide and over 70M apps, with up to 90K new apps added daily.
- This global sensor network enables our platform to be predictive by letting machine intelligence identify complex patterns that indicate risk. These patterns would otherwise escape human analysts.
- Mobile is a new era of computing and requires a new era of security solution designed exclusively for this platform. Lookout has been securing mobility since 2007 and has expertise in this space.

Lookout empowers your organization to adopt secure mobility without compromising productivity by providing the visibility IT and security teams need. To learn how you can secure your mobile fleet today, contact us at sales@digicelbusinessprotect.com
